Reel 69 23, Item 1

METEOROLOGICAL REGISTER.

REMARKS

ON the question whether in a series of years there be any material change in the climate of a given district of country; and if so, how far it depends upon cultivation of the soil, density of population, &c. the most contradictory opinions have been advanced. While one contends, that as population increases and cultivation extends the climate becomes warmer, another is equally convinced that it becomes colder, and a third, that there is no change in this respect. These opinions are for the most part founded on a comparison of the climate of Europe at the present day with what it is supposed to have been two thousand years ago; and their great discrepancy may in some measure be accounted for from the circumstance, that the facts are few and the period of observation remote; while the changes, if any, have been exceedingly slow, and their ratio to the alleged causes exceedingly uncertain.

The United States, however, appear to offer an opportunity of bringing the question to the test of experiment and observation. For here within the memory of many now living the face of whole districts of country has been entirely changed; and in several of the States two centuries have effected as much as two thousand years in many parts of Europe. In this respect, the "Landing of the Pilgrims" in 1620 is as remote a period as that of the invasion of Gaul or of Britain by Julius Caesar.

The time for improving this opportunity, however, like that for recording the history, language, manners, and customs of the aborigines of the country, is fast passing away; and in a few generations, both these sons of the forest and the interminable wilderness they inhabited will, for all useful purposes, be as though they had never been. As, therefore, the military posts within the United States afford every convenience for making numerous observations over an extensive district of country, and regular diaries of the weather have for some years past been kept at most of them, the following tables have been prepared in the form that appears best calculated for reference, in order to preserve the facts thus collected.

The first twelve tables for each year give the mean of the observations at the several posts for each month, and the thirteenth, the mean for the whole year. The last, or general ta-

ble gives the average of all the observations at the several stations, and also the average for the several years, calculated in the manner stated in page 5. Should it be practicable to obtain similar observations for eight or ten years, it is proposed to collect, if possible, such as may have been made at an early period after the settlement of the country, in order to ascertain what changes, if any, have taken place, either in the mean temperature, the range of the thermometer, the course of the winds, or the weather, in the Atlantic States.

The posts at which these observations were made are situated between $27^{\circ} 57'$ and $46^{\circ} 39'$ of north latitude, and between $67^{\circ} 04'$ and $95^{\circ} 43'$ of longitude west from Greenwich; embracing an extent of $18^{\circ} 42'$ of latitude, and $28^{\circ} 39'$ of longitude. The elevation of the north western, or interior, stations above those on the Atlantic coast has not been accurately ascertained; the following however is believed to be near the truth. Fort Brady, situated at the outlet of Lake Superior, is 595 feet above the level of tide water; Fort Howard, at the Southern extremity of Green Bay, which empties into Lake Michigan, 600 feet; Fort Crawford, at Prairie du Chien, near the junction of the Wisconsin and Mississippi rivers, 580 feet; Fort Snelling, near the junction of the St. Peters and Mississippi rivers, 780 feet; Council Bluffs, a few miles above the junction of the Platte and Missouri rivers, 800 feet. Baton Rouge, on the Mississippi, 120 miles above New Orleans, and Cantonment Jesup, near the Sabine river, 25 miles from Natchitoches, are in Louisiana; Cantonment Clinch near Pensacola, Cantonment Brooke near Tampa Bay, and St. Augustine, in Florida. Fort Moultrie is in the harbor of Charleston, South Carolina; Fort Johnston near Smithville, North Carolina; Fort Severn at Annapolis, in Maryland; Fort Mifflin in the Delaware, 6 miles below Philadelphia; Fort Columbus in the harbor of New York; Fort Wolcott in the harbor of Newport; and Fort Sullivan near Eastport, in the State of Maine. The observations at the City of Washington are introduced by way of comparison, as the latitude of this City is very nearly the same with that of the centre of the several military posts. They were made by the Rev. Mr. Little, by whom they were very politely furnished for the present purpose.

Although from the circumstances under which these observations were made at several of the posts, they may not be as accurate as could be wished, yet they are, perhaps, sufficiently so for the purpose of general abstracts; for the mean of each month being deduced from 90, and of each year from 1095 observations, occasionally errors would not materially affect the general result.

The chief object at present being to record facts, the following remarks are premised merely for the convenience of

those who may be curious in these matters without wishing the trouble of tedious calculations. In order to ascertain the means for the several years, as given in the last table, the extreme stations are taken, and as many intermediate ones, at the North and South respectively, as are found to be equi-distant from them, or nearly so. Thus in 1822, Fort Snelling is the extreme northern, and Cantonment Clinch the extreme southern, post; Council Bluffs is $3^{\circ} 28'$ south of the former, and Fort Johnston $3^{\circ} 36'$ North of the latter, &c. The aggregate of these should give the mean of the centre of the district of country in which the observations were made; and the result appears to be near the truth. For the latitude of the City of Washington is $38^{\circ} 53'$, and the average mean temperature is 56.56; the centre of the several stations at which these observations were made is in latitude $38^{\circ} 13'$, and the average mean temperature is 56.52. In comparing the eastern and western posts, those in about the same latitude are of course taken; thus, Council Bluffs is $24^{\circ} 25'$ west, and but $0^{\circ} 05'$ north, of Fort Wolcott; Fort Snelling is $26^{\circ} 04'$ west, and but $0^{\circ} 09'$ north, of Fort Sullivan. To prevent the constant repetition of the terms East and West, the numbers only are stated; it being always understood that the first relates to the East and the second to the West; thus, in January 1822 the means are stated be 22.20 and 16.25, that is, 22.20 at the East, and 16.25 at the West.

In 1822 the aggregate mean temperature of the year was 57.06; the highest degree 108; the lowest -29; and the range 137. The proportion of winds was N. 5.07, S. W. 4.95, N. W. 4.93, S. 4.60, S. E. 3.39, W. 3.10, N. E. 2.67, E. 1.71. The proportion of weather, Fair 18.90, Cloudy 5.03, Rain 5.63, Snow 0.85. At Fort Snelling, the most northern station, the mean for the year was 44.32; the highest degree 92, the lowest -29, and the range 121. At Cantonment Clinch, the most southern station, the mean for the year was 68.97, the highest degree 93, the lowest 20, and the range 73. On comparing the eastern and western posts, it appears that at the former the mean temperature of the winter months is much higher, and that of the summer months much lower, than at the latter. Thus in January it is 22.20 and 16.35, February 27.40 and 26.40, March 35.52 and 41.10, April 42.31 and 46.53, May 55.21 and 62.60, June 62.63 and 72.10, July 68.33 and 77.54, August 66.52 and 75.02, September 63.54 and 64.19, October 51.25 and 45.84, November 42.49 and 32.96, December 29.55 and 8.03. During the six winter months the means are 34.73 and 28.44; being 6.26 *higher* at the east, and during the summer months they are 59.76 and 66.33; being 6.67 *lower* at the east than at the west; making but a fractional difference for the year, which was 47.24 at the east and 47.38 at the west. The highest degrees were 88 and

108, the lowest -9 and -29, the ranges 97 and 137; and it was greatest at the west, not only for the year, but also for every month except July and August, when it was about the same. The course of the winds was N. 3.54 and 5.08, N. W. 6.29 and 7.25, N. E. 1.91 and 3.08, E. 1.21 and 0.96, S. E. 1.79 and 3.63, S. 5.04 and 3.04, S. W. 7.37 and 5.37, W. 3.26 and 1.96. Weather, Fair 18.34 and 19.75, Cloudy 7.37 and 4.17, Rain 4.00 and 4.33, Snow 0.34 and 2.16. Prevailing winds at the east, S. W., N. W. and S. at the west, N. W., S. W. and N. The proportion of fair weather and rain was nearly equal; of cloudy weather much more, and of snow much less, at the east.

In 1823 the aggregate mean temperature of the year was 55.22; the highest degree 100; the lowest -38; and the range 138. The proportion of winds was S. W. 7.22, N. E. 4.84, S. E. 4.10, N. W. 3.85, S. 3.19, N. 3.15, W. 2.29, E. 1.65. Weather, Fair 16.48, Cloudy 6.16, Rain 5.98, Snow 1.77. At Fort Brady, the most northern post, the mean of the year was 39.66; the highest degree 90; the lowest -30; and the range 120. At Cantonment Clinch, the most southern station, the mean was 68.25; the highest degree 94; the lowest 11; and the range 83. On comparing the eastern with the western posts, the mean of the winter months for this year also is *higher*, and of the summer months *lower*, at the east. Thus in January it is 24.12 and 21.05, February 21.90 and 15.62, March 32.65 and 32.42, April 42.41 and 48.82, May 51.19 and 57.02, June 64.60 and 72.50, July 66.76 and 75.36, August 66.65 and 72.89, September 58.79 and 60.14, October 49.92 and 49.12, November 35.79 and 35.67, December 32.05 and 23.77. During the winter months the means are 32.73 and 29.61, being 3.12 *higher* at the east; and during the summer months 58.40 and 64.45, being 6.05 *lower* at the east. The means for the year are 45.50 and 47.03, being 1.53 higher at the west, where the winter was comparatively warmer than in 1822. The highest degrees were 90 and 102, the lowest -10 and -30; the ranges 100 and 132. Course of the winds, N. 3 and 2.03, N. W. 7.50 and 2.79, N. E. 2.83 and 6.87, E. 1.24 and 1.87, S. E. 1.83 and 2.23, S. 5.08 and 3.20, S. W. 5.95 and 9.50, W. 2.95 and 1.83. Weather, Fair 15.12 and 18.41, Cloudy 9.62 and 7.95, Rain 4.16 and 2.40, Snow 1.50 and 1.58. Prevailing winds at the East N. W., S. W. and S.; at the West S. W., N. E. and S. The proportion of fair weather was considerably less, of cloudy weather and rain considerably greater, at the east; the proportion of snow about the same.

In 1824 the aggregate mean temperature of the year was 55.56; the highest degree 96; lowest -33; and the range 129. The proportion of winds, S. 5.33, S. W. 4.73, N. W. 4.65, N. 3.85, S. E. 3.83, W. 3.40, N. E. 2.84, E. 1.79. The proportion of weather, Fair 17.55, Cloudy 5.03, Rain 6.29, Snow

1.49. At Fort Brady, the most northern post, the mean temperature was 40.94; the highest degree 89, the lowest -33; and the range 122. At Cantonment Clinch, the most southern station, the mean temperature was 69.10, highest degree 95, lowest 24, range 71. On comparing the eastern and western posts, the means for January were 27.22 and 25.82, February 26.62 and 22.70, March 33.45 and 28.45, April 44.12 and 44.78, May 50.61 and 58.43, June 60.77 and 66.28, July 67.49 and 74.49, August 65.61 and 71.53, September 60.44 and 62.00, October 49.96 and 46.91, November 38.50 and 30.28, December 32.41 and 26.53. During the winter months the means were 34.69 and 30.11, being 4.58 *higher* at the east; and during the summer months 58.17 and 62.92, being 4.75 *lower* at the east. The means for the year 46.43 and 46.51, a difference of but 0.08. The highest degrees were 86 and 103, the lowest -19 and -21, the range 105 and 124. Course of the winds, N. 3.16 and 4.45, N. W. 6.83 and 1.20, N. E. 2.58 and 6.70, E. 1.50 and 1.00, S. E. 1.70 and 1.87, S. 4.28 and 6.78, S. W. 6.33 and 8.12, W. 3.45 and 0.36. Weather, Fair 16.58 and 18.04, Cloudy 8.50 and 7.04, Rain 4.70 and 3.33, Snow 0.70 and 2.08. The prevailing winds at the east were N. W., S. W. and S; at the West S. W., S. and N. E. The proportion of fair weather was less, and of cloudy weather and rain greater, at the east, the proportion of snow much less.

In 1825 the aggregate mean temperature of the year was 58.27; the highest degree 102; the lowest -25; and the range 127. The proportion of winds, S. E. 5.52, N. W. 4.81, N. E. 4.72, W. 3.24, N. 3.23, S. W. 3.09, S. 2.79, E. 1.45. The proportion of weather, Fair 16.91, Cloudy 5.67, Rain 6.49, Snow 1.32. At Fort Brady, the most northern station, the mean for the year was 40.60; highest degree 89; lowest -25; range 114. At Cantonment Brooke, the most southern station, the mean for the year was 72.37; the highest degree 92; the lowest 40; range 52. On comparing the eastern and western posts, the means in January were 26.34 and 17.63, February 27.67 and 29.58, March 36.89 and 38.31, April 45.12 and 57.32, May 53.37 and 63.94, June 65.04 and 71.86, July 70.98 and 75.42, August 68.12 and 74.83, September 59.86 and 63.60, October 51.94 and 50.36, November 41.13 and 38.50, December 31.65 and 19.26. During the six winter months the means were 35.94 and 32.27, being 3.67 *higher* at the east; and during the summer months 60.41 and 67.83, being 7.42 *lower* at the east. The means for the year were 48.17 and 50.05, being 1.88 warmer at the west; the highest degrees were 94 and 102, the lowest -5 and -25, the ranges 99 and 127. The course of the winds was N. 2.91 and 4.03, N. W. 6.25 and 5.74, N. E. 3.50 and 2.16, E. 1.54 and 1.50, S. E. 1.62 and 4.58, S. 3.62 and 5.29, S. W. 7.83 and 4.37, W. 3.54 and 2.66. Weather, Fair 16.53 and 16.25, Cloudy 9.62 and 6.62, Rain

3.62 and 6.12, Snow 0.60 and 1.41. Prevailing winds at the East S. W., N. W. and S.; at the West N. W., S. and S. E. The proportion of fair weather was about the same; of cloudy considerably greater, and of rain and snow much less, at the east.

By the last table it appears that the aggregate mean temperature was highest in 1825 and lowest in 1823, there being however but a fractional difference between this and the following year. The average of the whole period is 56.52, being about one degree lower than at Bourdeaux in latitude $44^{\circ} 50'$. The range was greatest in 1822 and 1823, and nearly equal; and several degrees less in 1824 and 1825, being least in the latter year. The N., N. W., W. and E. winds are most uniform in the several years; the rest are more variable. The prevailing winds are S. W., N. W., and S. E. The proportion of fair weather was greatest in 1822 and least in 1823, which however differed but little from 1825. The proportion of cloudy weather, rain, and snow, is pretty equal, except that there was much less snow in 1822. The aggregate mean for the whole period was, Fair 17.46, Cloudy 5.47, Rain 6.10, Snow 1.36.

In 1822 the mean temperature at the east and west was nearly equal. In 1823, 1.74 lower at the east, and but 0.33 lower at the west, than in the previous year; the winter being comparatively milder at the west. In 1824, the mean temperature was again nearly the same, but about one degree lower than in 1822. In 1825, it was higher than in any previous year, and 1.88 higher at the west than at the east. The average for the four years was 46.83 and 47.74, being 0.91 higher at the west. In 1822, the range was 40° greater at the west; in 1823 it was 32° greater; in 1824, 19° ; and in 1825, 25° . The greatest proportion of fair weather, both at the east and west, was in 1822; with rather the most at the west. In 1823, there was much less at the east and somewhat less at the west, than in the former year. In 1824, there was rather more at the east and about the same at the west as in 1823; and in 1825 it was about the same at the east and considerably less at the west, than in the previous year. The proportion of rain was nearly the same at the east during the four years, but somewhat less in 1825. There was a great difference at the west, being much greater in 1825, than in any other year, and much less in 1823. The proportion of snow was much the greatest at the east in 1823, and least in 1822; at the west it was greatest in 1822 and 1824, and least in 1825. The average for the four years was, Fair 16.64 and 18.11, Cloudy 8.86 and 6.44, Rain 4.12 and 4.04, Snow 0.78 and 2.05; being rather more fair, and less cloudy weather, with about the same proportion of rain, and much more snow, at the west.

The following table may serve to compare the annual mean temperature at some of the military posts in the United States.

with that at several places on the other side of the Atlantic, and shews that it is considerably greater at the latter, and especially in the higher latitudes.

PLACES.	North latitude,	Longitude,	Mean Temperature.
Petersburg	59 56	30 24 E.	38 80
Stockholm	59 20	18 00 E.	42 39
Edinburg	55 57	3 00 W.	47 70
Berlin	52 32	13 31 E.	49 00
Leyden	52 10	4 32 E.	52 25
London	51 31	- - -	51 90
Rouen	49 26	1 00 W.	51 00
Paris	48 50	2 25 E.	52 00
Vienna	48 12	16 22 E.	51 53
Nantes	47 13	1 28 E.	55 53
Poitiers	46 59	0 30 E.	53 80
Fort Brady	46 59	84 43 W.	41 37
Padua	45 23	12 00 E.	52 20
Fort Snelling	44 53	93 08 W.	45 00
Bordeaux	44 50	0 26 W.	57 60
Fort Sullivan	44 44	67 04 W.	42 44
Fort Howard	44 40	87 00 W.	44 50
Marseilles	43 19	5 27 E.	61 80
Fort Crawford	43 03	90 53 W.	45 52
Fort Wolcott	41 50	71 18 W.	51 02
Council Bluffs	41 25	95 43 W.	50 82
Pekin	39 54	116 29 W.	55 50
Washington	38 53	76 55 W.	56 56
Algiers	36 49	2 17 E.	72 00
Fort Johnston	34 00	78 05 W.	66 68
Cantonment Clinch	30 24	87 14 W.	68 77
Grand Cairo	30 00	31 23 E.	73 00
St. Augustine	29 50	81 27 W.	72 23

From this it appears that in the higher latitudes the average difference for the same degree of mean temperature is $14^{\circ} 30'$, and in the lower ones $7^{\circ} 30'$, the mean of which is 11° . Thus the mean temperature at Stockholm, in latitude $59^{\circ} 20'$, is about the same as at Fort Sullivan, in latitude $44^{\circ} 44'$; while that at Rouen, in latitude $49^{\circ} 26'$, is about the same as at Fort Wolcott, in latitude $41^{\circ} 20'$; and at St. Augustine, in latitude $29^{\circ} 50'$ it is but 0.77 lower than at Grand Cairo, in latitude 30° .

JOS. LOVELL.

Washington, September, 1826.
